

The H&M logo is rendered in a bold, red, stylized script font. The 'H' and 'M' are thick and slanted, with a small ampersand between them.

DASHBOARD

OVERVIEW OF AUTHENTICATION PROCESSES

INTRODUCTION

- This document provides an overview of the authentication process implemented for our system.
- Outlines key steps in the login, refresh token, and logout workflows.
- Intended for developers maintaining or enhancing authentication mechanisms.

PURPOSE AND AUDIENCE

- **Purpose:**
 - Explain the logic and flow behind the authentication process.
 - Detail interactions between components for security and session management.
- **Audience:**
 - Developers working on the **Frontend** and **Backend** systems.
 - Engineers managing the **Mosquitto Broker** and **MQTT Clients**.

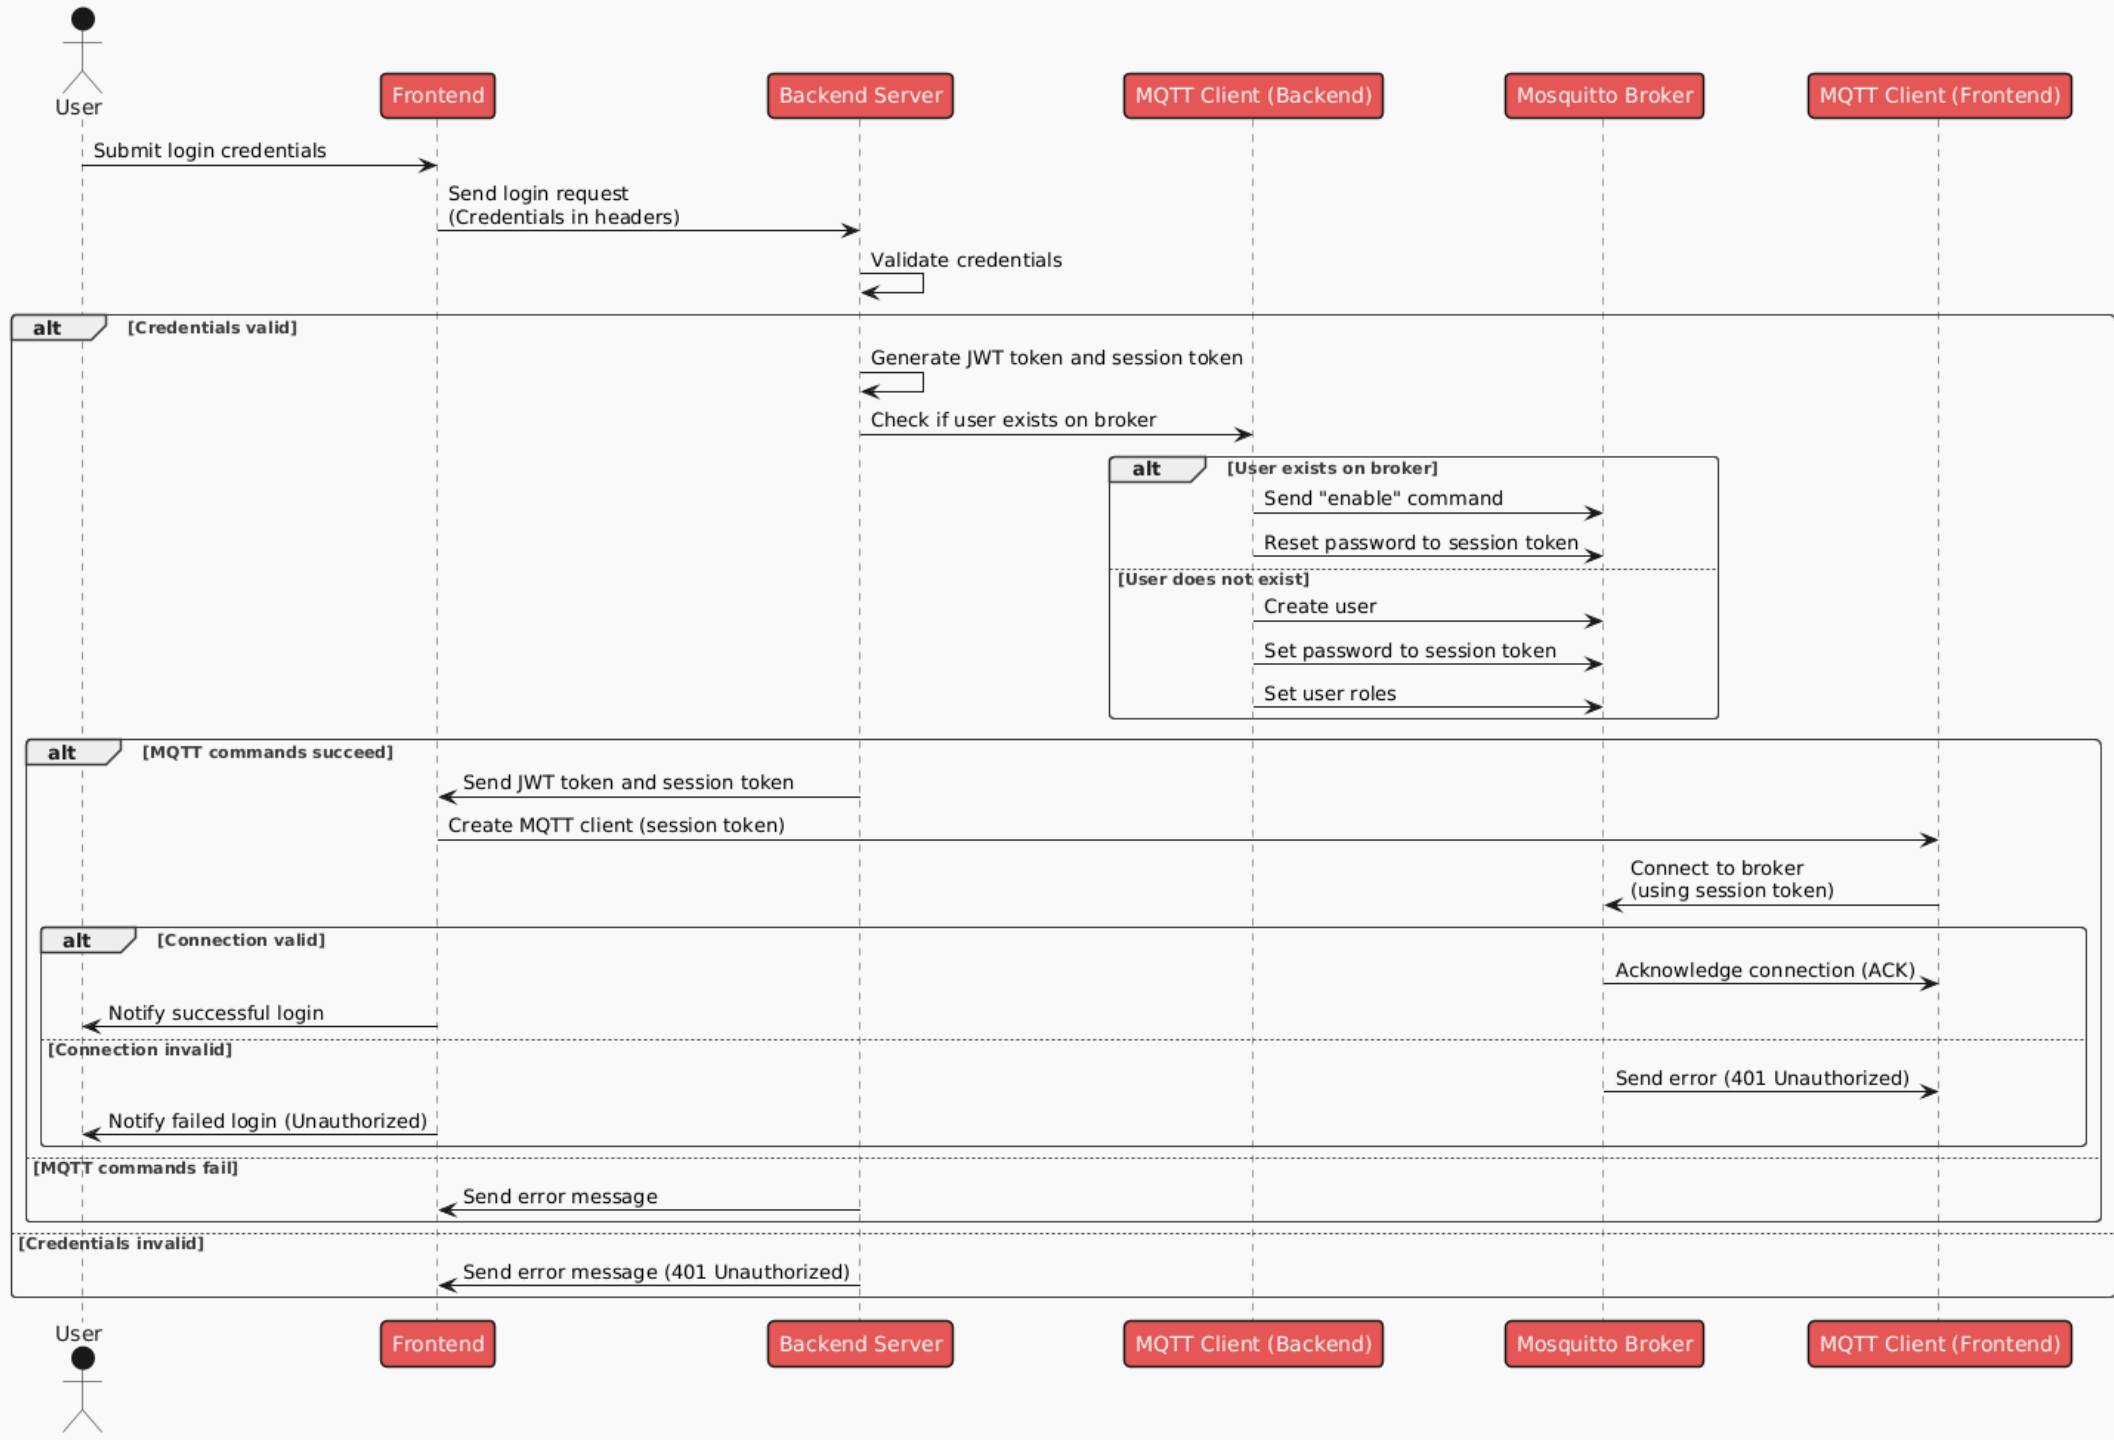

*AUTHENTICATION
WORKFLOW
OVERVIEW*

- Three primary processes:
 - **Login:** User authentication and session creation.
 - **Token Refresh:** Automatic token renewal to maintain user sessions.
 - **Logout:** Secure user logout and session termination.

LOGIN PROCESS

- **Workflow Description:**

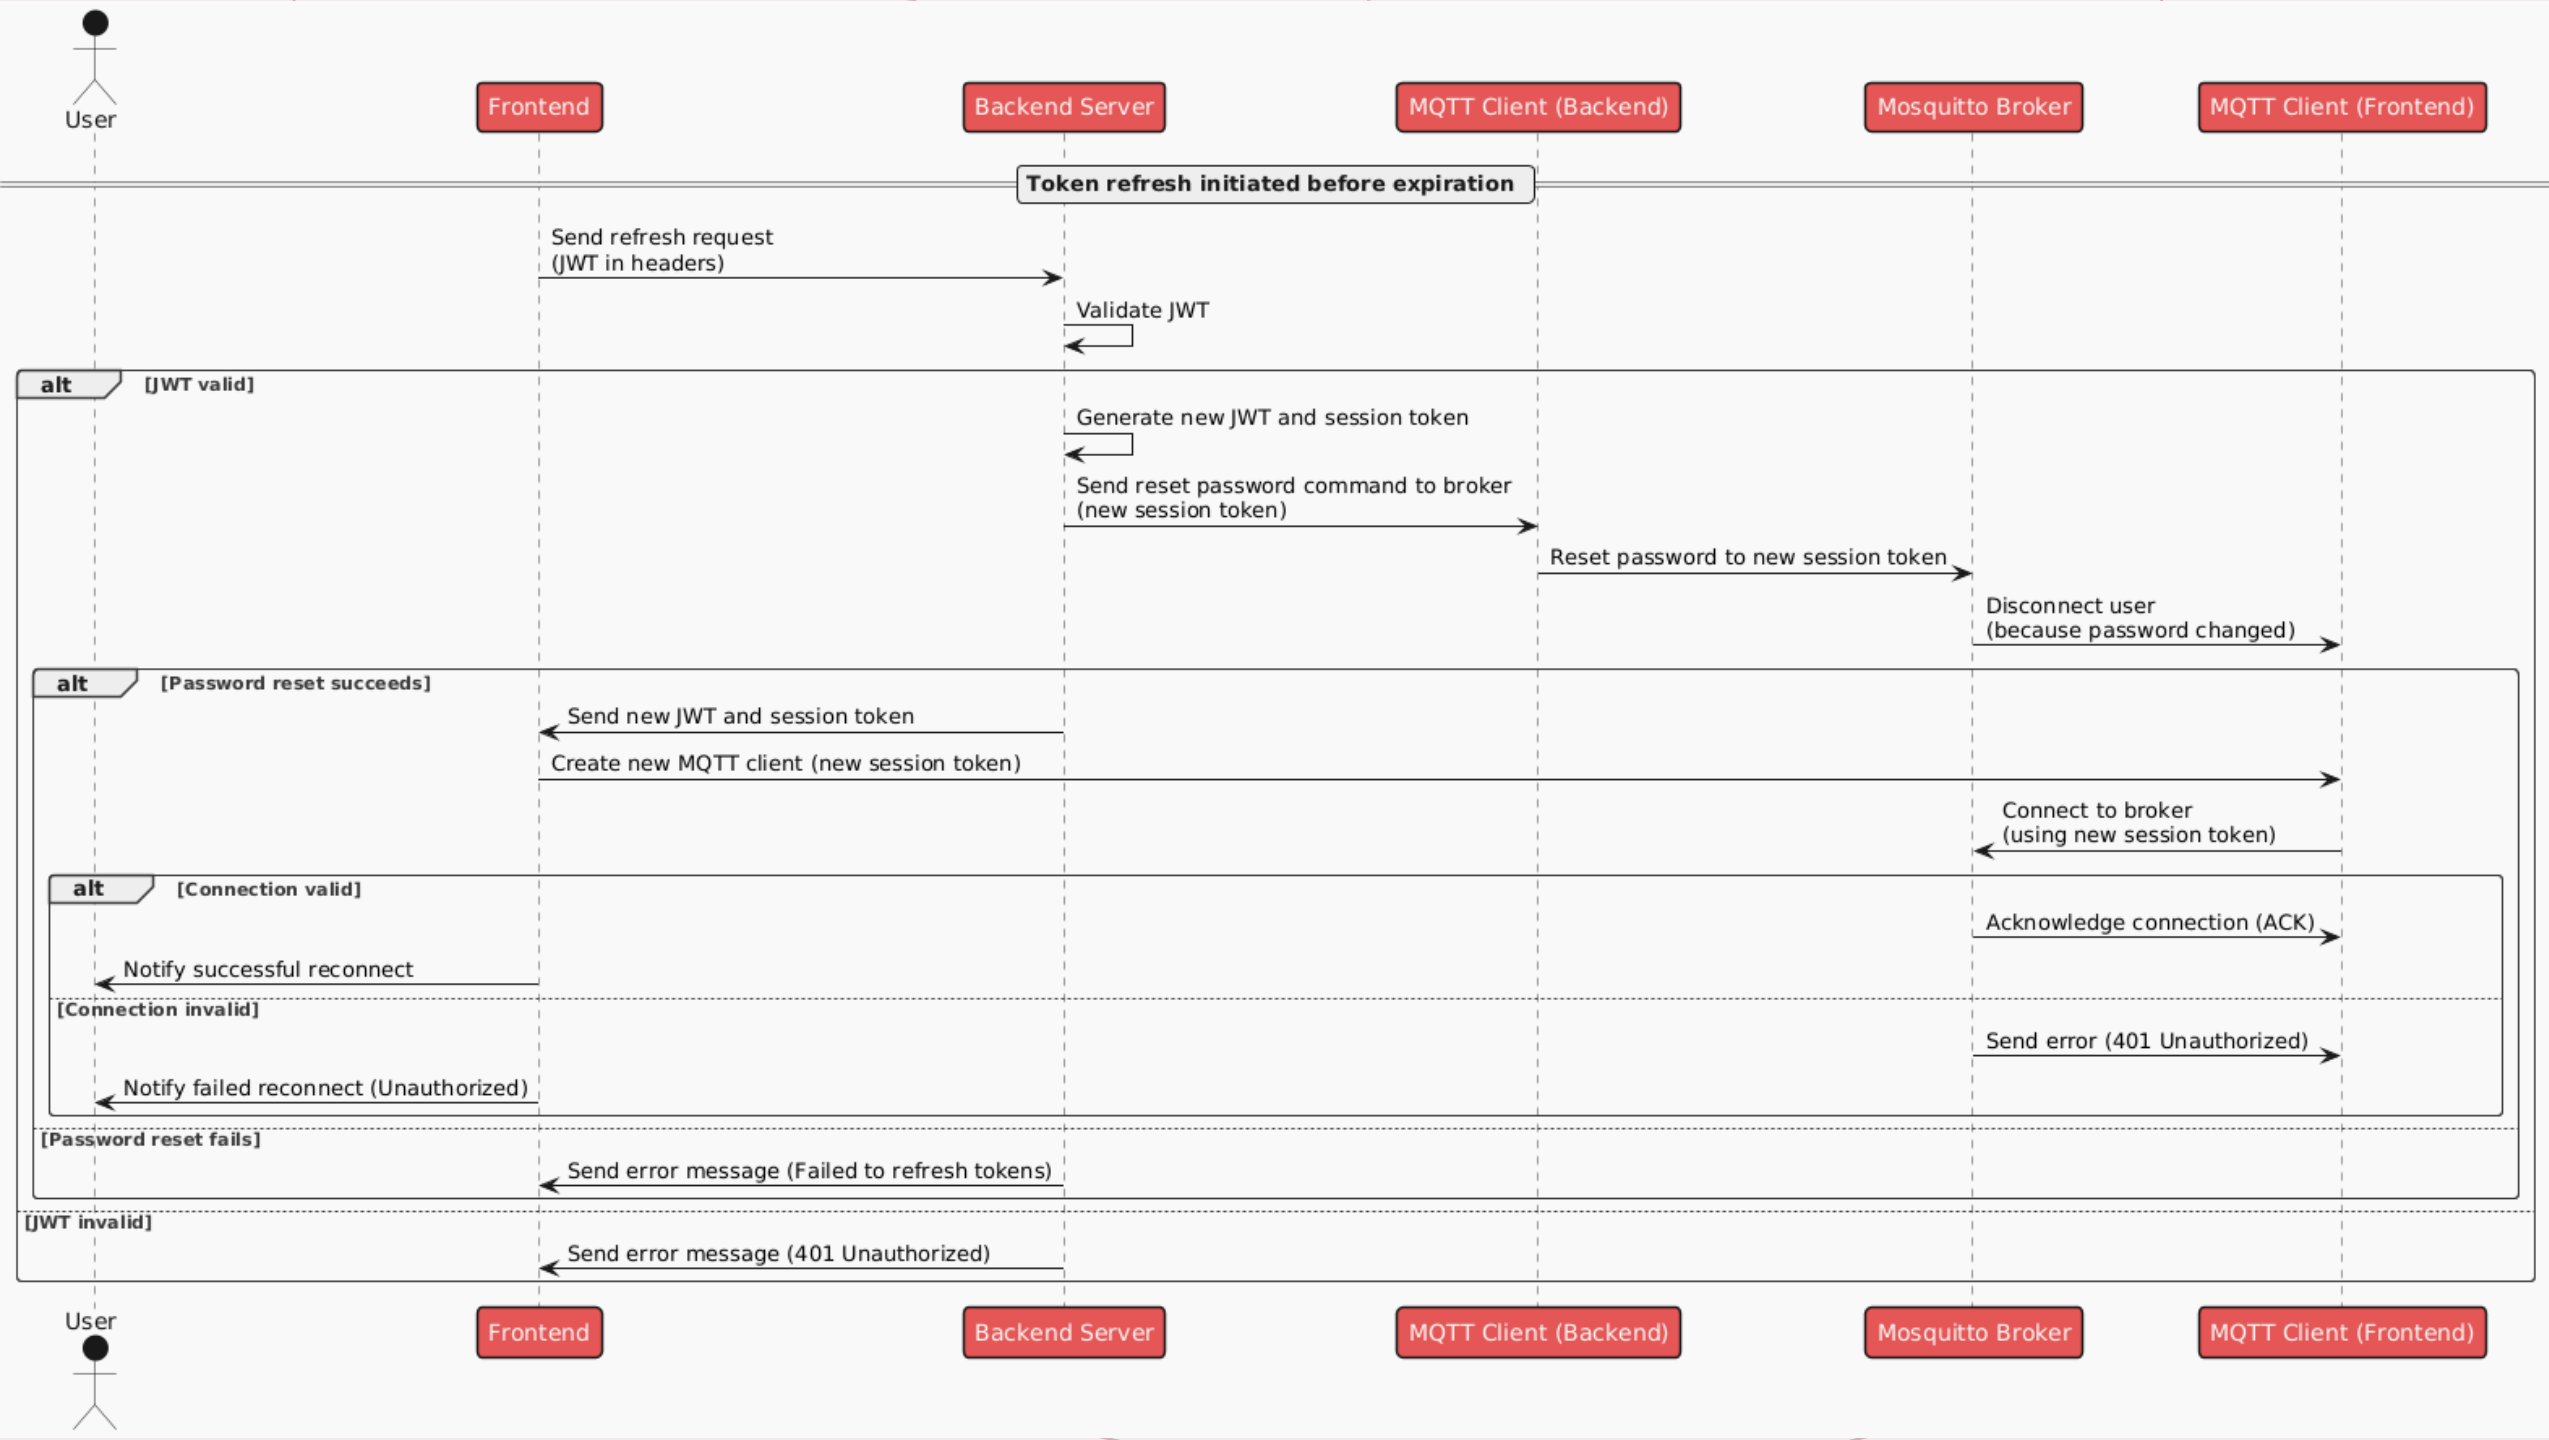

- User submits login credentials via the **Frontend**.
- **Frontend** sends credentials to the **Backend Server**.
- **Backend** validates credentials and generates **JWT** and **session token**.
- **MQTT Client (Backend)** interacts with the **Mosquitto Broker**.
- Returns tokens to the **Frontend** for establishing a new MQTT connection.

TOKEN REFRESH PROCESS

- **Workflow Description:**

- Frontend automatically sends refresh request before token expiration.
- **Backend** validates JWT and generates new tokens.
- **MQTT Client (Backend)** resets password in **Mosquitto Broker**.
- User disconnects, and new tokens are returned for a new MQTT connection.

LOGOUT PROCESS

- **Workflow Description:**

- User sends a logout request via the **Frontend**.
- **Frontend** sends the request to the **Backend**.
- **Backend** validates JWT and sends disable command to the **Mosquitto Broker**.
- User is disconnected, and tokens are removed from the **Frontend**.
